

# TDT Remote Crane System

TDT "one-man" Remote modular crane system

The TDT remote crane is a new concept for the lightweight remote camera cranes that can be combined with Egripment remote heads.

We would like to add the TDT system as a "different" and completely "new" design offered at an affordable price, but with the high Egripment quality all our products are known for. All sections are made from extremely stiff duralumin, making the arm rigid but at the same time still very lightweight.

The TDT "one-man" remote crane system is a nice simple design and easy to build up. The TDT crane is a modular system with arm sections of 1,5m/5ft long. This gives the user the ability to transport the complete arm in a small vehicle.

The TDT crane system can be purchased in different versions from 1.5m/5ft up to 9m/30ft. Because of the modular system you can create a variety of 6 different crane arms with the TDT system, with a maximum payload of 30kg/65lbs.

The TDT crane can be sold as a package with our 301 remote head, which is the latest of its kind, slim and versatile just like the TDT arm. The load capacity on our 301 remote head is suitable for lightweight ENG cameras and smaller Digital Cinema Cameras, with a maximum payload of 15kg/33lbs,
